

Protect it

Physics element: Force and motion

Your mission: Using the materials in your area, protect your egg from the weights that will attempt to crush it.

Rules:

- We must be able to check your egg during the testing
- You have 10 minutes to design your protection
- You have 20 minutes to make and test your design with your practice egg and final egg
- Your final egg, in its protection, will be placed on the surface and then weights will be added to the top

How will you gain points?

Every kg of weight your egg survives will be converted to points.

Example: 6kg survived = 6 points
